1. ETL Environment Setup

For installing ETL environment in my laptop, I have followed process.

1. First, I have installed MySQL Server in my laptop
2. I installed SQLYOG GUI tool and test the connection.
3. After successfully testing the connection, I created the new Database sandbox.
4. Once the database creation, I installed Pentaho Business intelligence tool.
5. To Connect to database, we need JDBC driver, so I downloaded MySQL Java Connector jar file.
6. Again, i tried to connect to database and I successfully connected to Database, below is the screenshot.
